

Windows Login Unlocker v1.6

The current version of the program : 1.6

The author of the program : Joker-2013 , Nikzzzz

Interface language : English

Treatment : not required (free)

System requirements : Windows All

Description of the program : Small and modern utilities for resetting passwords of Windows accounts, editing their properties, creating new and deleting existing users.

Pros :

- There is a version x86, x64.
- All actions are performed in the main window of the program.
- You can control the program only with the mouse or only with the keyboard, or both.
- Lots of different information about a user account.
- Resetting the password of the local user and Microsoft LiveID accounts
- Removing restrictions and blocking from the account
- Clearing the logon history and entering incorrect passwords
- The program works with any Windows operating system (except active).
- Mounting and processing a VHD container.
- Warning if system is in FastBoot mode
- Install bypass from nikzzzz , to log into an account, without knowing and entering a password. At the first start of the program, a backup copy of the user database is created, then this can be done manually.

- You can undo the changes by restoring the user database from a backup.
- Correct creation of a new System User (with Administrator rights)
- Unicode support (there will be no crackpot)
- User names, descriptions and group names will be displayed in the national language, without distortion.
- Run not only in WinPE, but also in Windows family OS

Cons :

- Doesn't work with an active system.
 - It needs to be booted from another operating system or WinPE.
 - Does not decrypt or display the user's real password.
 - Does not extract password hashes for subsequent decryption.
 - When you change the password to your own, a task is created that is executed when the system starts.
 - English language localization (no multilingual)
-

Terms of Use :

We use the program for home purposes, on our computer, for our account, if you have forgotten your password or viruses have blocked your account ...

Commercial use, for hacking and stealing information is prohibited!

Mini Help :

- Boot from a system other than the one you want to edit.
 - Run the program, select the section with the system and the user.
 - Press the Reset \ Unlock button.
 - Load the system and check the result.
-

Additional Information :

Attention!!! Your use of this software is at your own risk, with the understanding that it may harm the operating system if misused.

Many Thanks To :

Nikzzz - for help, suggestions, procedures and friendliness

Gemostarter - for FastBoot procedures

KisPavVlad - for financial assistance to the project and practical advice

ssanchess - for financial assistance to the project

I'm sorry someone did not mention in this list, thank you friends!

Screenshot :

The screenshot displays the Windows Login Unlocker v1.4 x86 BIOS Firmware WinOS interface. The main window shows a list of Windows operating systems and a table of user accounts. The 'Administrator' account is selected, and its details are shown in the 'User information' dialog box.

Windows Login Unlocker v1.4 x86 BIOS Firmware WinOS

Select the Windows operating system to edit the account properties:

System Root	Operating System	Sleep	Style	Partition Size
